

# ALCOHOL

## REPLACEMENT

This product is an isopropyl alcohol replacement used in lithographic dampening systems. It gives a sharper and cleaner image than isopropyl alcohol.

Alcohol replacement is a cost effective, super-concentrated alcohol replacement for use in any system. It contains highly active wetting agents specifically designed for the printing industry.

- Significantly reduces ink consumption by preventing its emulsification.
- Allows printing with less water giving you cleaner, sharper images.
- Contains a non-piling additive efficiently reducing piling on the blanket.
- Does not evaporate, therefore, no replenishment required.
- Will not harden rollers unlike isopropyl alcohol.
- Eliminates any foaming problems.

Unigraph's alcohol replacement is a safe product. It is biodegradable, environmentally friendly, without toxic fumes and unpleasant odor.
